

Eastern Pennsylvania Chapter of SCTE will be presenting on the Partnership need of the MSO Community on planning and execution of Forced Fiber relocates.

We have all seen the traffic cones start to arrive on a familiar street. Then the signs and traffic impact awareness campaigns. Preparation activities from the Power utilities by laying down poles. Road milling machines parked at night. All of this is activity the public sees while traveling from point a to b. To those of use in the MSO community, it could only mean a forced fiber relocation project will soon occur.

Come and join us at PA Broadband Summit at the Marriott in Lancaster PA on April 26, 2023, for a training session on the process for planning a forced Fiber relocation. We will be looking at the end-to-end process to complete a forced fiber relocation. The process as it passes from Planning/Design to Construction to Headend Readiness to Night of cut execution. We will describe in detail the needs to complete this requirement.
